Deleting a Geofence from the Options tab [GPv3]

Lu Parente - 2019-06-11 - in How-To

Geofences allow Administrators and Monitors to define and highlight geographical locations on the map which can be used to monitor when device users **entered, exited or cross through** specific areas.

Geofences can be created using a **circle, polygon** or drawing a **line** on the map and a fence width can be defined as well as given a custom colour. In order to trigger geofence notifications and alert individuals of geofence crossings, you will be required to create an Event Notification for the geofence. When creating the Event Notification for the Geofence, you will be able to define which devices the geofence should apply to and who will be notified.

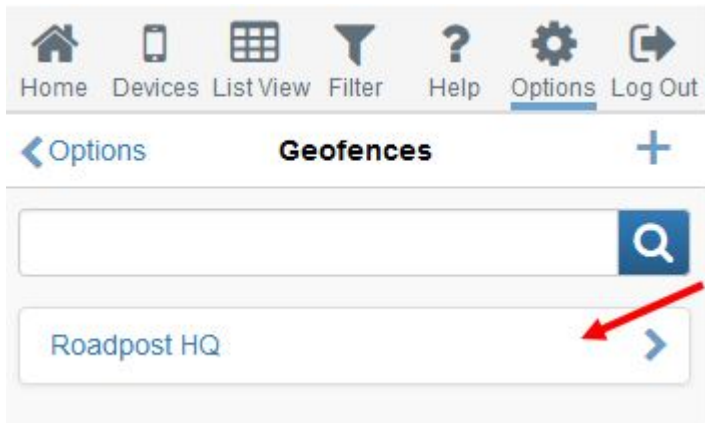

This article explains how to delete a geofence.

1. To delete a geofence, navigate to the **Options** tab and select **Geofences**.

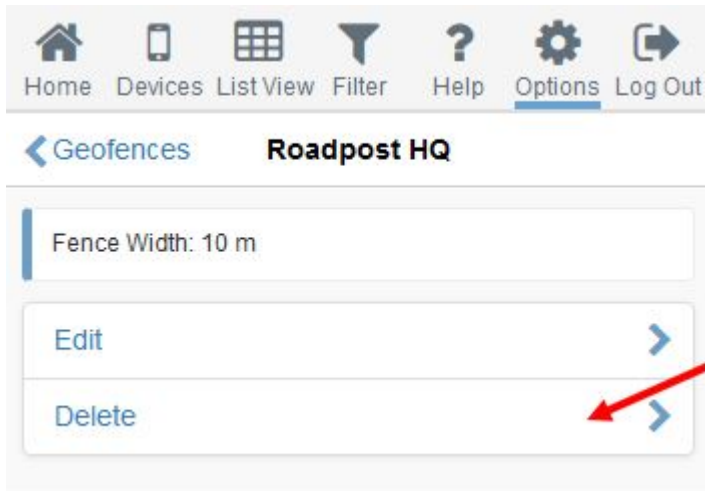

Options

- My Profile >
- Users >
- Groups >
- Global Address Book >
- Global Event Notifications >
- Global Canned Messages >
- Check-In Schedules >
- Synchronization Tools >
- Tracks >
- Geofences >
- Points of Interest >
- Account Management >
- Log a Support Request

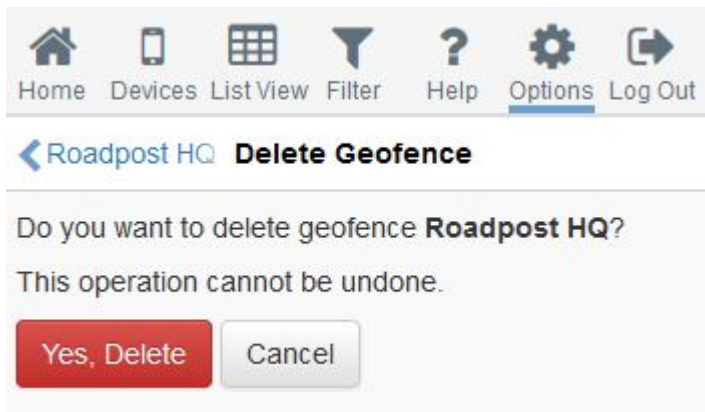

2. The Geofences page will be displayed. Select the geofence you would like to delete from the list.

3. Select **Delete** from the geofence details page.

4. You will then be prompted to confirm the deletion of the selected geofence. Select **Yes, Delete** to continue.

5. Your geofence will now be deleted from the map.

Note: If an event notification has been configured for this geofence, navigate to **Options > Event Notifications** to update or delete the associated notification.
