Editing a Custom Filter using the Filter tab [GPv3]

Lu Parente - 2015-10-07 - in How-To

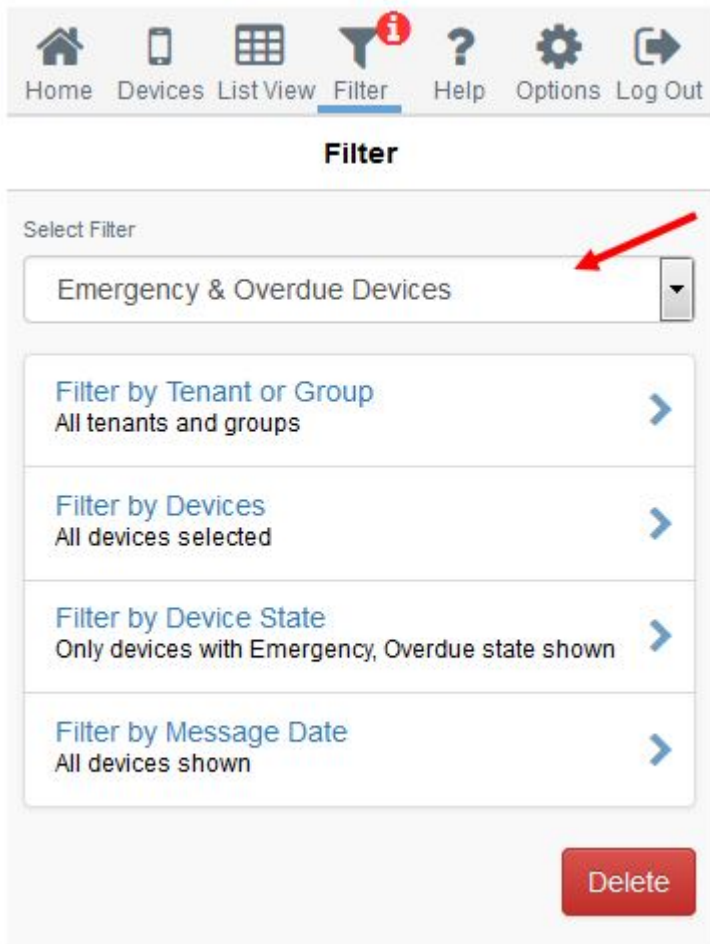

The **Filter** tab provides Administrators and Monitors with the ability to filter what is being displayed throughout the entire web app experience. When filters are used, they are applied to the Map, the Home tab, Devices tab, List View tab and Options tab. Filters are used to focus on specific criteria or a combination of criteria such as a **tenants/sub-tenants** or **groups, devices, device state,** and **message date**. Filters can also be saved for convenient access at a later time.

This article explains how to **edit** custom filters.

1. To edit a previously saved custom filter, navigate to the **Filter** tab.

2. Select the previously saved filter from the **Select Filter** drop-down.

3. Make any necessary modifications by selecting any of the filter categories and defining the required criteria. In the example below, we're going to add **Pending Check-In** to our filter. Press **OK** to apply the filter settings.

Home Devices List View **Filter** Help Options Log Out

< Filter **Filter by Device State**

All	<input type="checkbox"/>
Emergency	<input checked="" type="checkbox"/>
Overdue	<input checked="" type="checkbox"/>
Pending Check In	<input checked="" type="checkbox"/>
Pending Location Request	<input type="checkbox"/>

Include only those devices in the selected states

OK Cancel

4. Your new filter settings will now be applied to the map and throughout the entire web app as well as the "i" indicator will appear on the **Filter** tab to confirm the filter is active. Press **Save** to update your custom filter settings.
