Filtering by Device State using the Filter tab [GPv3]

Lu Parente - 2015-10-07 - in How-To

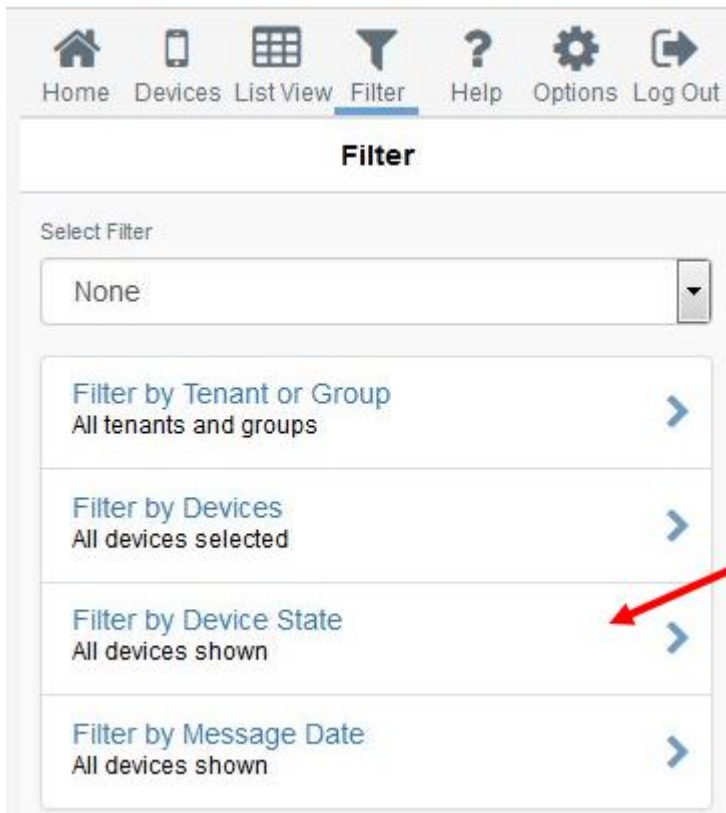

The **Filter** tab provides Administrators and Monitors with the ability to filter what is being displayed throughout the entire web app experience. When filters are used, they are applied to the Map, the Home tab, Devices tab, List View tab and Options tab. Filters are used to focus on specific criteria or a combination of criteria such as a **tenants/sub-tenants** or **groups, devices, device state**, and **message date**.

This article explains how to **filter by device state**.

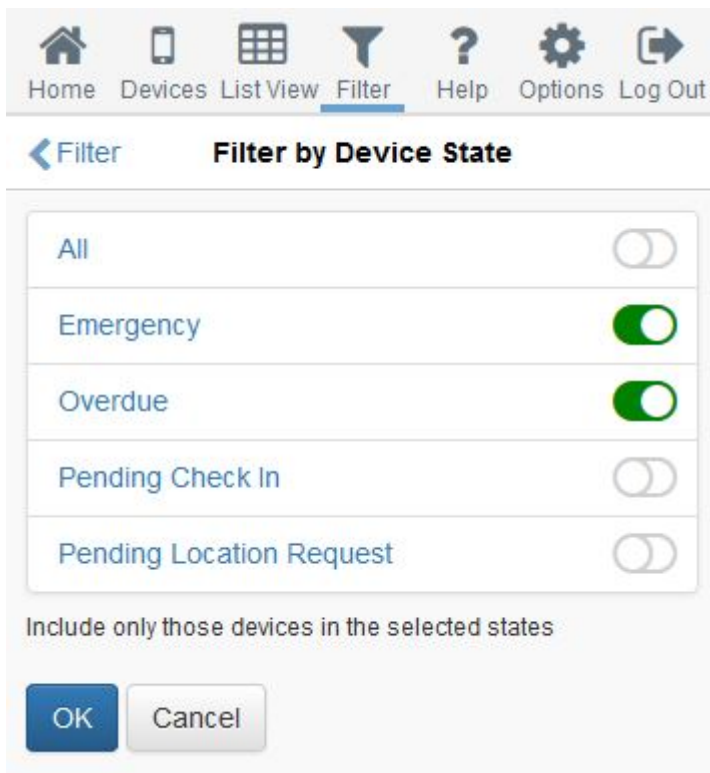

1. To filter by device state, navigate to the **Filter** tab.

2. The filtering options will be displayed. Select **Filter by Device State** from the list.

3. Select the device state or states that you would like to focus on and press **OK** to apply your filter.

4. Your filter will now be applied to the map and throughout the entire web app as well as the "i" indicator will appear on the **Filter** tab to confirm the filter is active.
