Navigating to the GeoPro Web App using Account Management [GPv3]

Lu Parente - 2016-06-28 - in How-To

The **Account Management** section allows Administrators to switch between the **GeoPro Web App** and the **Account Management** section. The GeoPro Web App is where you as an Administrator manage all of your devices, users, groups, event notifications, device communication etc. The Account Management section is where you manage all of your device licenses, service plans, payment details etc.

Note: The Account Management section can be accessed directly from the **Options** menu in the GeoPro web app or by navigating to <https://account.geoprosolutions.com/> and entering your Administrator credentials.

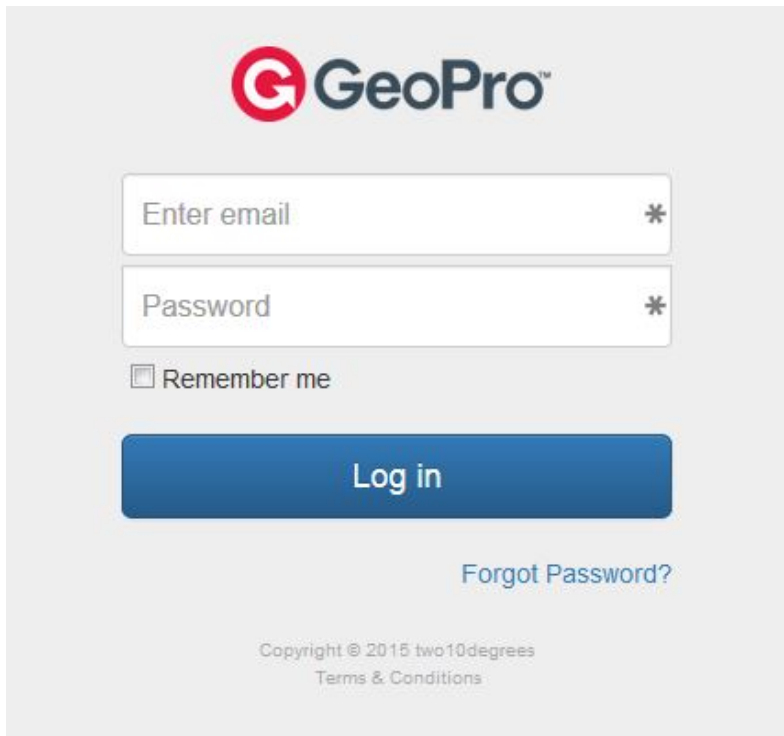

You may or may not be prompted to login to the GeoPro Web App or Account Management section based on your web browser settings.

1. To navigate to the GeoPro Web App from the Account Management section, select the **Go To GeoPro Web App** tab.

2. Depending on your web browser settings, you may or may not be prompted to login.

If prompted to login, enter your login credentials and select **Log In**.

Otherwise, you will be automatically logged in and the GeoPro Web App map and dashboard will be displayed and you can begin using the GeoPro web app.
