Searching from the Home tab [GPv3]

Lu Parente - 2015-09-30 - in How-To

The Home tab of the GeoPro Web App provides a universal search function. The universal search can be used to search devices (includes device name & IMEI), users or groups.

1. Simply type in the **device name**, **device IMEI**, **user name**, or **group name** in the search box. The search will automatically display relevant search results and filter the map accordingly.
