Viewing a Device's Event Notifications from the Devices tab [GPv3]

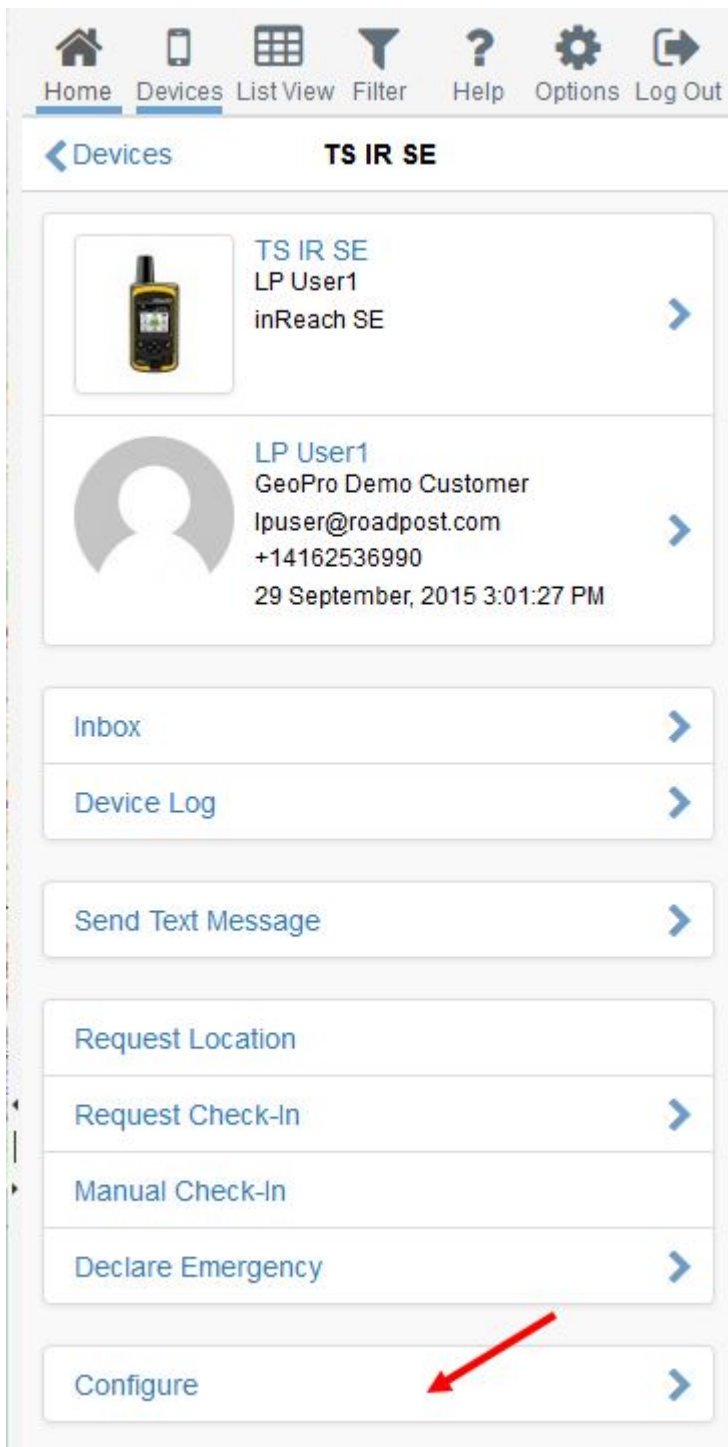

Lu Parente - 2015-11-10 - in How-To

While working with a specific device from the Device's tab, an Administrator and Monitor both have the ability to **view** the **Event Notifications** which have been configured for and applied to the selected device. If the Administrator or Monitor wishes to modify any of the **Event Notifications**, this can be done by selecting **Global Event Notifications** from the **Options** tab.

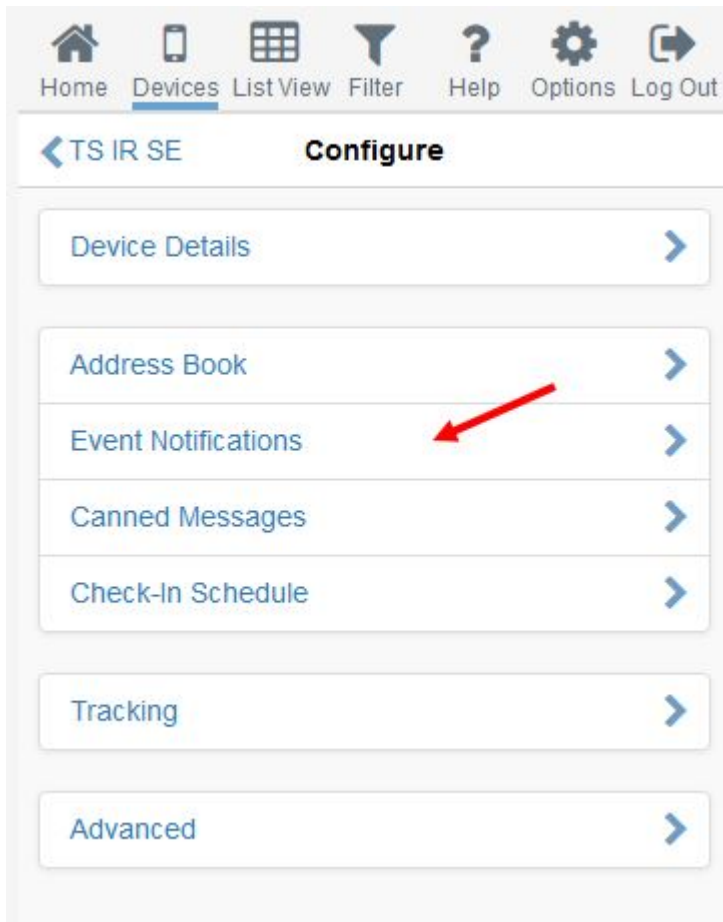

1. To view the Event Notifications for a specific device, navigate to the **Devices** tab and select the desired device.

2. The device page for the selected device will be displayed, select **Configure** from the list.

3. From the device configuration page, select **Event Notifications** from the list.

4. All of the Event Notifications which have been configured for the selected device will be displayed.
