## Viewing your Device Check-In Schedule Details from the Home tab [GPv3]

Lu Parente - 2015-11-12 - in How-To

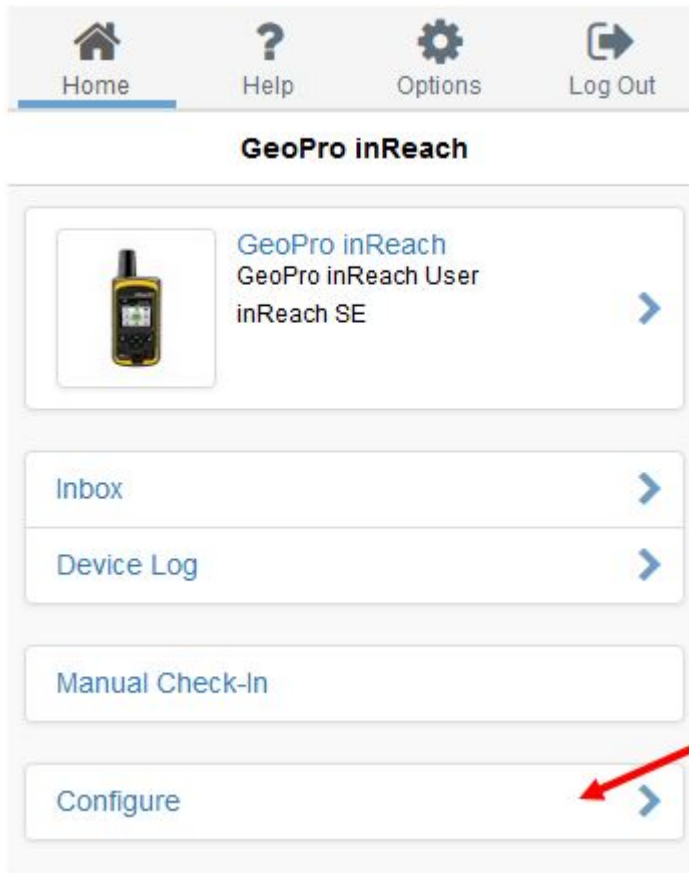

**Check-In Schedules** allow Administrators and Monitors to automate management of routine scheduled check-ins. Administrators and Monitors both have the ability to create and assign check-in schedules to devices.

As a user, you have the ability to dynamically **enable** and **disable** check-in schedules from both the GeoPro web app and your device (if supported by your device type). When schedules are enabled or disabled by a user, appointed recipients will receive a notification advising them of your schedule status.

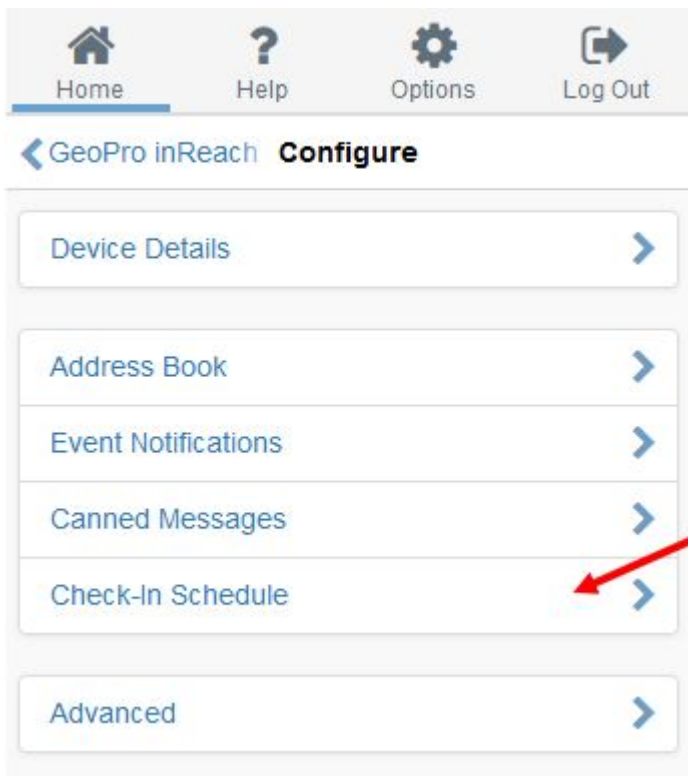

**Note:** The ability to dynamically enable or disable an assigned check-in schedule is not supported by the Iridium Extreme.

This article explains how to view the details of your assigned check-in schedule.

1. To view your assigned schedule, navigate to the **Home** tab and select **Configure**.

2. From the device configuration page, select **Check-In Schedule** from the list.

3. The details of your assigned check-in schedule will be displayed.
