## Viewing your Device Tracks from the Options tab [GPv3]

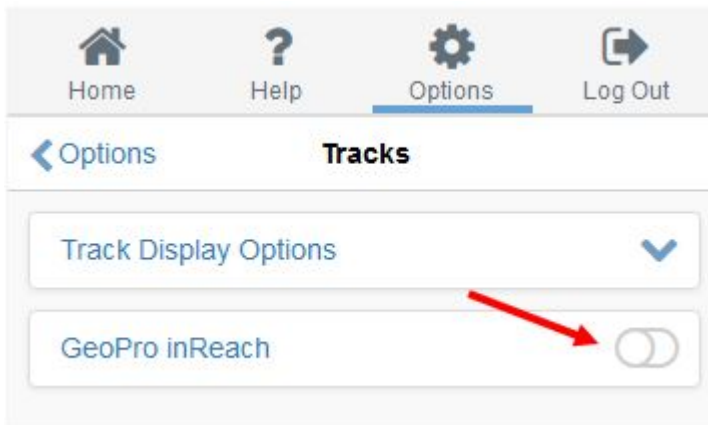

Lu Parente - 2023-03-20 - in How-To

As a User, **Tracks** provides you with the ability to expand and collapse the breadcrumb trail for your device in the GeoPro web app. When Tracks is toggled on, the breadcrumb trail for your device will be displayed on the map. If Tracks is left toggled on, then the breadcrumb trail will remain visible, even when navigating away from the Tracks page.

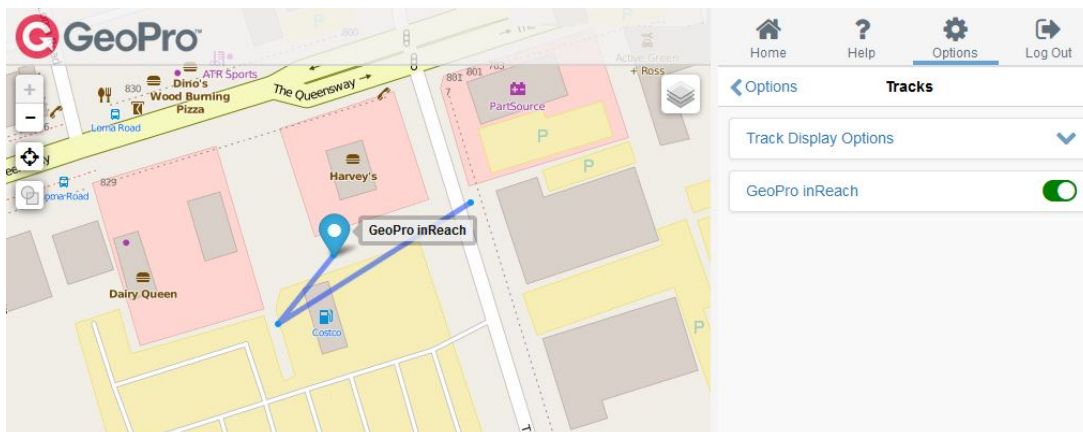

1. To enable Tracks and view your breadcrumb trail, navigate to the **Options** tab and select **Tracks**.

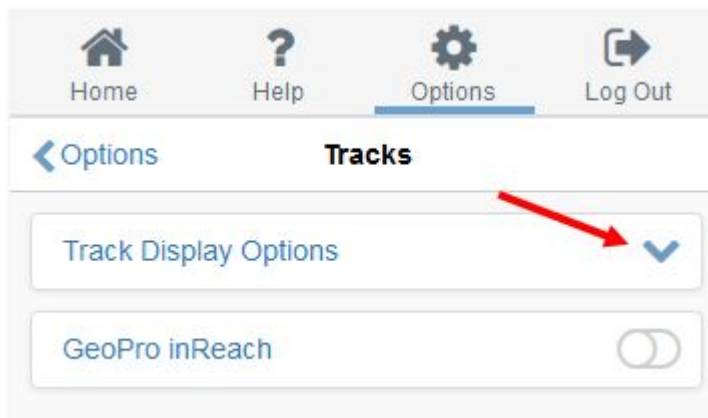

2. The Tracks page will be displayed. Select the **toggle** next to your device to **enable** or **disable** the breadcrumb trail.

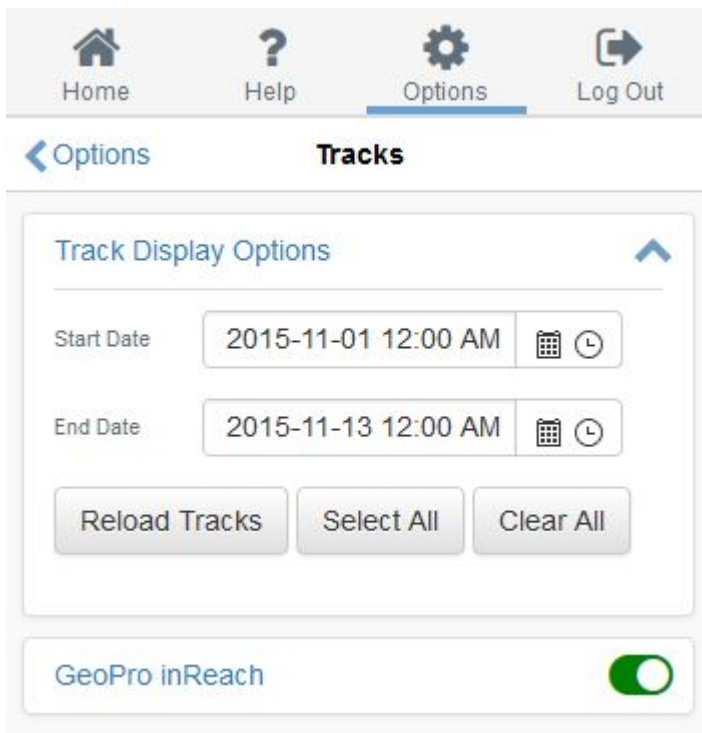

3. Once **enabled**, the breadcrumb trail for your device will be displayed on the map.

4. If you would like to **filter** the amount of breadcrumb data being displayed, select the **Track Display Options** drop-down.

5. Define the **Start Date**, **End Date** and select **Reload Tracks**. The breadcrumb data will be filtered and display accordingly on the map.

6. To collapse all breadcrumb trails, Tracks must be toggled **off** for your device.
